

Online retrieval, evaluation and visualisation of messages in the UNICORE 6 workflow system

13. Oktober 2009

Sandra Bergmann

Jülich Supercomputing Centre

s.bergmann@fz-juelich.de

Topic overview

Grid Middleware UNICORE

- UNICORE workflow system

Visualisation of messages

- Hierarchical graph of services
- Sequence diagram

Database queries

- Structure of queries and answers

Comparison of different Workflow Engine implementations

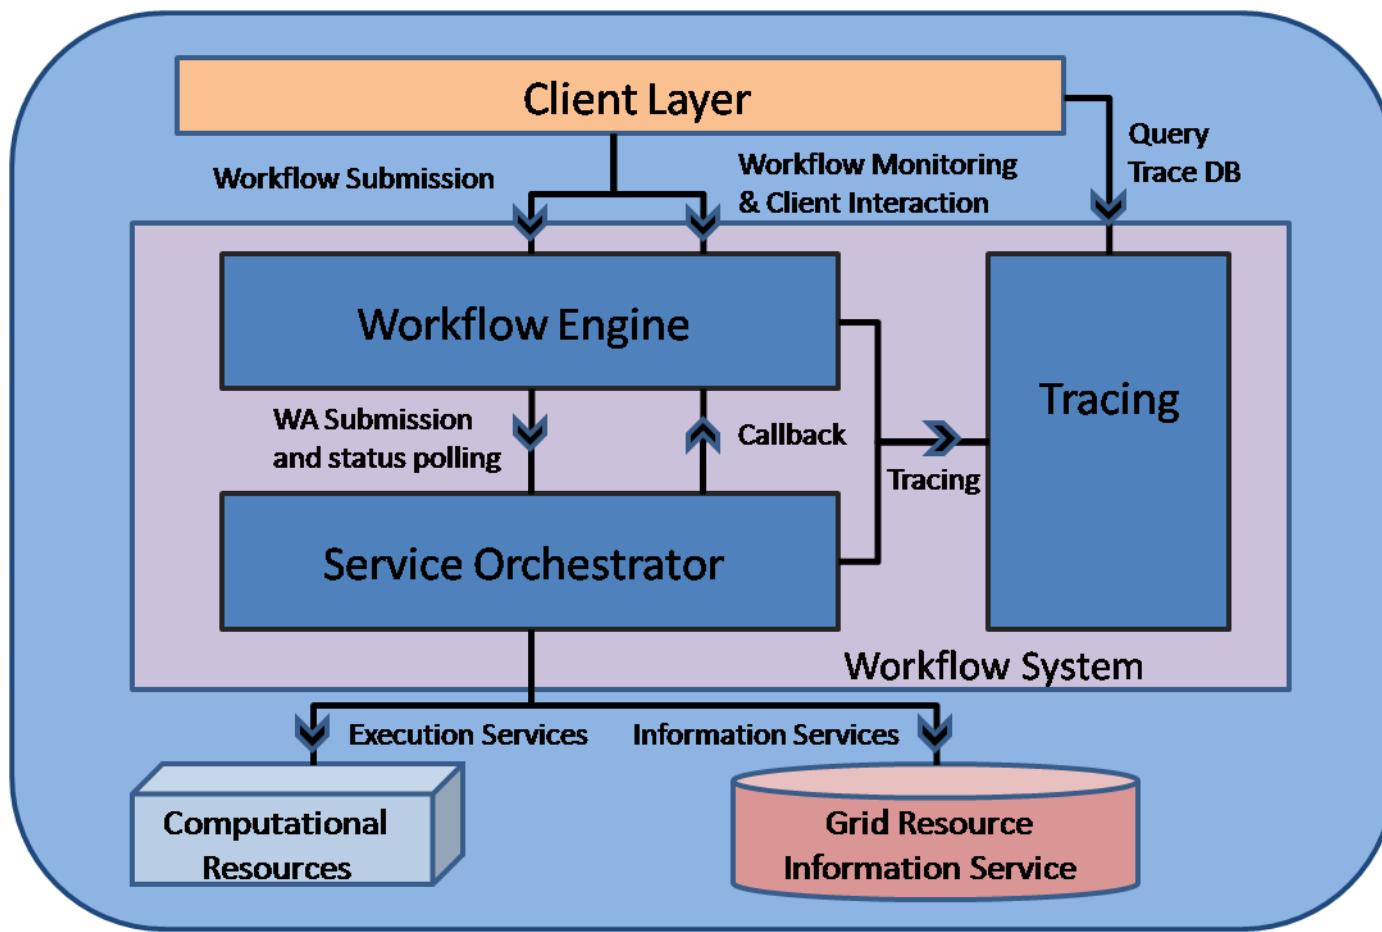

Summary and future work

Introduction

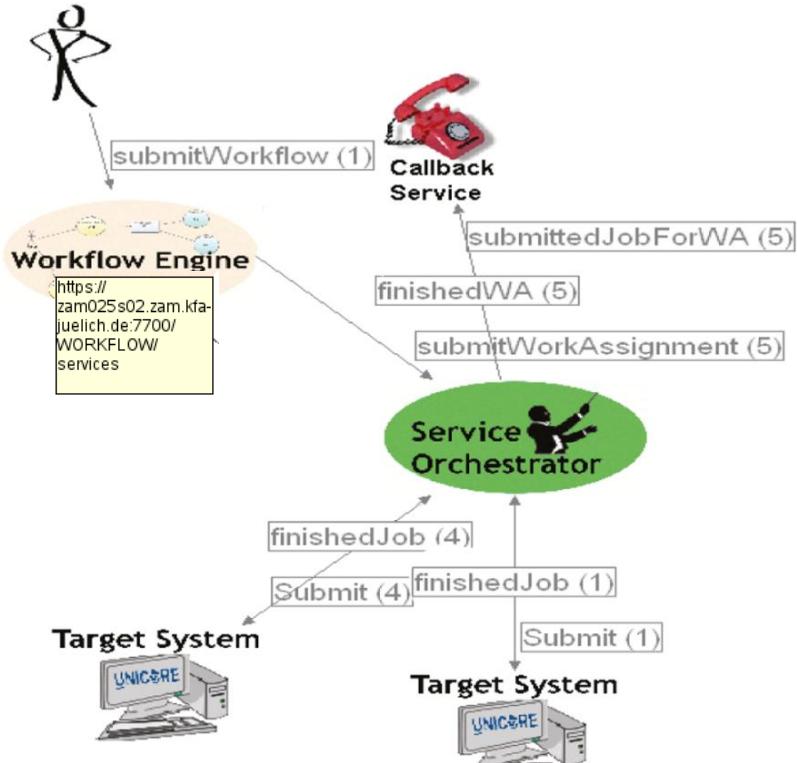

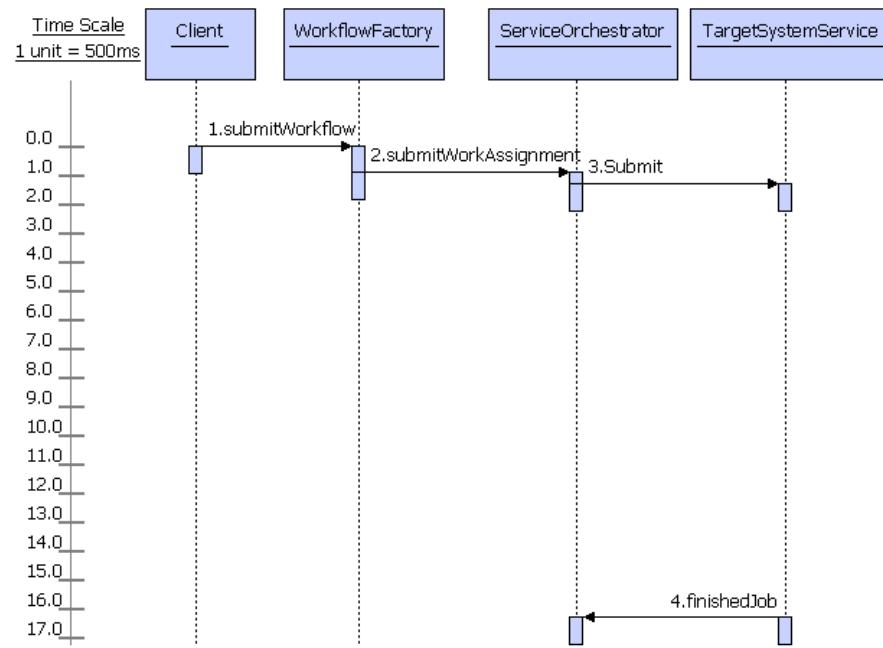

- **Grid middleware: UNICORE**
 - Coordination of combined resources
 - Hiding heterogeneity of resources
 - Providing services for resource management
 - Used in the DEISA project

UNICORE workflow system

Visualisation of messages

Hierarchical structure	Sequence diagram
 <pre> graph TD Client -- "submitWorkflow (1)" --> WF[Workflow Engine] subgraph WF [Workflow Engine] https["https://zam025s02.zam.kfa-juelich.de:7700/WORKFLOW/services"] end SO[Service Orchestrator] -- "submittedJobForWA (5)" --> WF SO -- "finishedWA (5)" --> WF SO -- "submitWorkAssignment (5)" --> TS1[Target System] TS1 -- "finishedJob (4)" --> SO TS1 -- "Submit (4)" --> SO TS1 -- "finishedJob (1)" --> SO TS1 -- "Submit (1)" --> SO Client -- "submitWorkflow (1)" --> SO </pre>	<p>Sequence diagram illustrating the message flow:</p> <p>Time Scale 1 unit = 500ms</p>  <pre> sequenceDiagram participant Client participant WFFactory as WorkflowFactory participant SO as ServiceOrchestrator participant TargetSystem as TargetSystemService Client->>WFFactory: 1.submitWorkflow activate WFFactory WFFactory->>SO: 2.submitWorkAssignment activate SO SO->>TargetSystem: 3.Submit activate TargetSystem TargetSystem->>SO: 4.finishedJob deactivate TargetSystem deactivate SO </pre>

Database structure

Source_id	Source_type	Target_id	Target_type
http://url.zam.kfa-juelich.de:7778 /services/ServiceOrchestrator	ServiceOrchestrator	http://url.zam.kfa-juelich.de:7777 /services/TargetSystemService	TargetSystemService

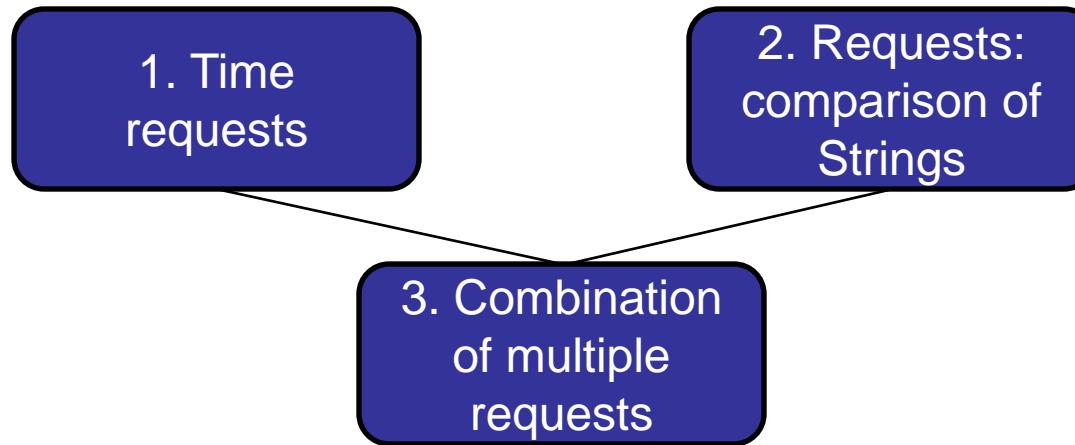

Timestamp	Operation	Message_id	Message
2009-01-19T09:28:22.963+01:00	submit	7fd725b5-938f-4a2b-8d5b-16e	XML-Dokument

Different analyses of messages

- Database query → mode
 - Messages related to one workflow
 - System messages
- Additionally, a time range is defined
- Easily extensible by adding new modes

XML-Schema document

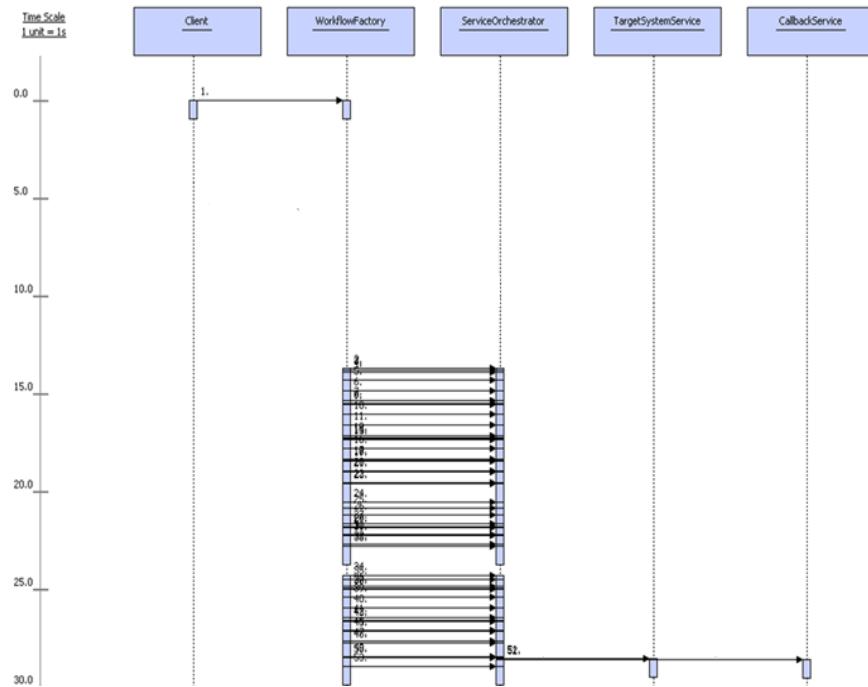

- Three types of requests

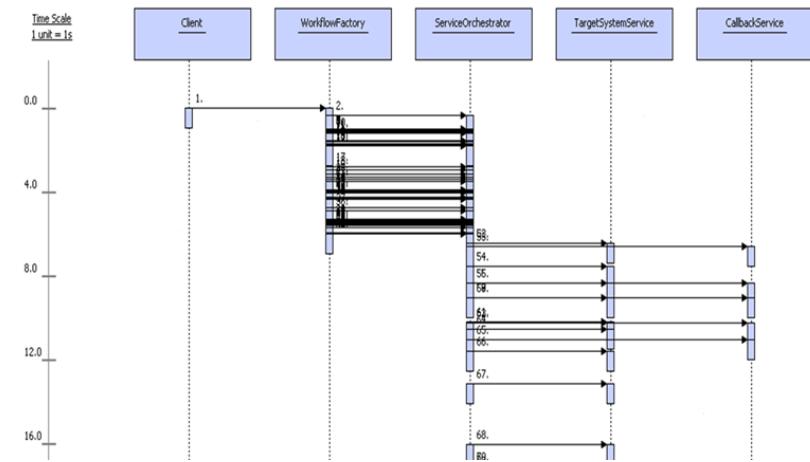

- Answer from the server:
 - Found messages (selected attributes and message ranges)
 - Number of found messages

Comparison of different Workflow Engine implementations

Workflow-Engine 1

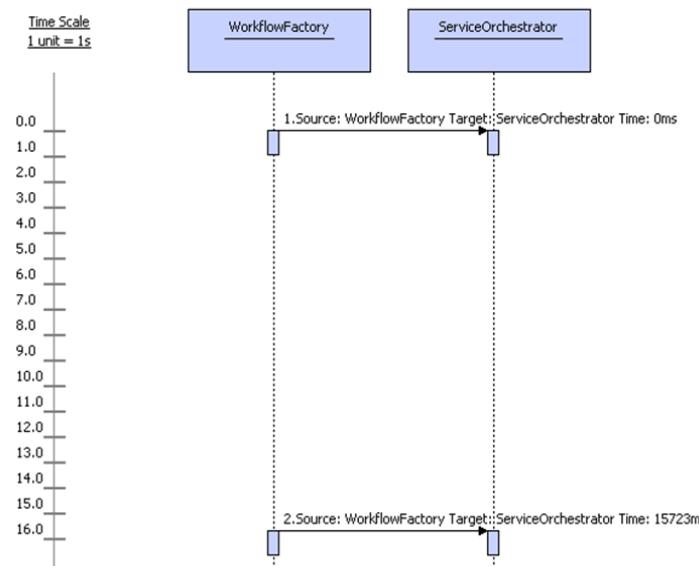

Workflow-Engine 2

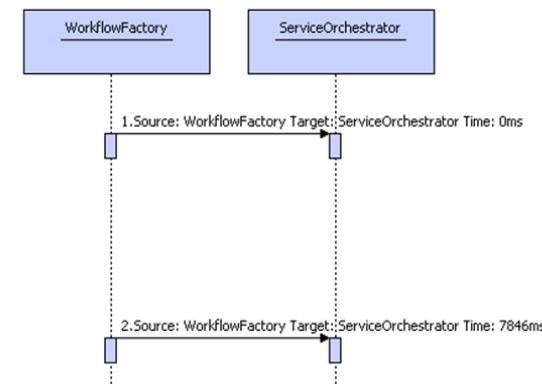

Comparison of different Workflow Engine implementations

Request: only messages that represent the first and last submissions of work assignments

Workflow-Engine 1

Workflow-Engine 2

Summary

- Grid Middleware UNICORE
 - Coordination of resources in grids
- Visualisation of messages in two different diagrams:
 - Hierarchical structure of services
 - Sequence diagram
- Database requests
 - Creation of complex Boolean requests

Future work

- Adding new modes
- Specific analyses of messages illustrated in pie charts or histograms
- Usage of XML specific requests

Thanks for your attention
