**The vehicle-track-soil dynamic
interaction problem in sequential and
parallel computing**

**Janusz Kogut Henryk Ciurej
Institute of Structural Mechanics
Cracow University of Technology**

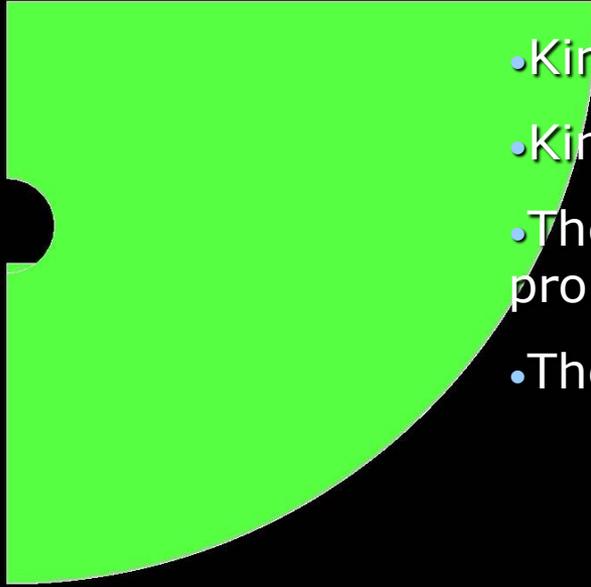

Problem outline

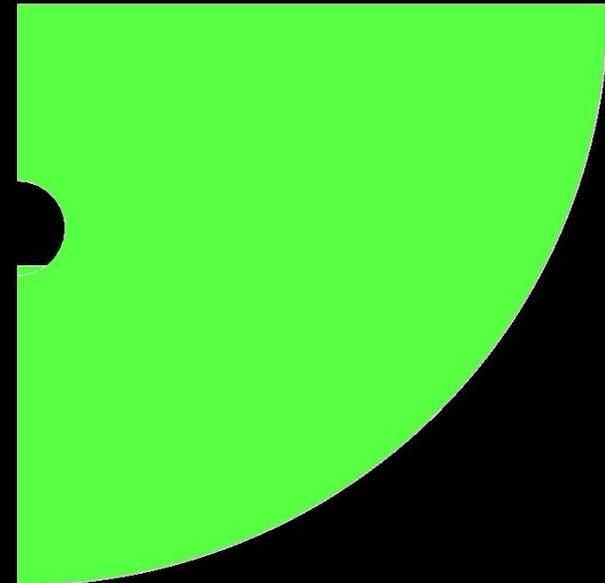

Numerical modeling and application

- Identification of the vehicle parameters
- Kinematic excitation – rail irregularities
- Kinematic excitation – wheel irregularities
- The vehicle-track-tunnel-soil interaction problems
- The dynamic response of the soil

```
Model: METRO
LC1: Load case 1
Step: 1 TIME: .1E-3
Nodal TVTX...G TVTX
Max = 0 Min = 0
```

```
Model: METRO
LC1: Load case 1
Step: 1 TIME: .1E-3
Nodal TVTX...G TVTY
Max = 0 Min = 0
```

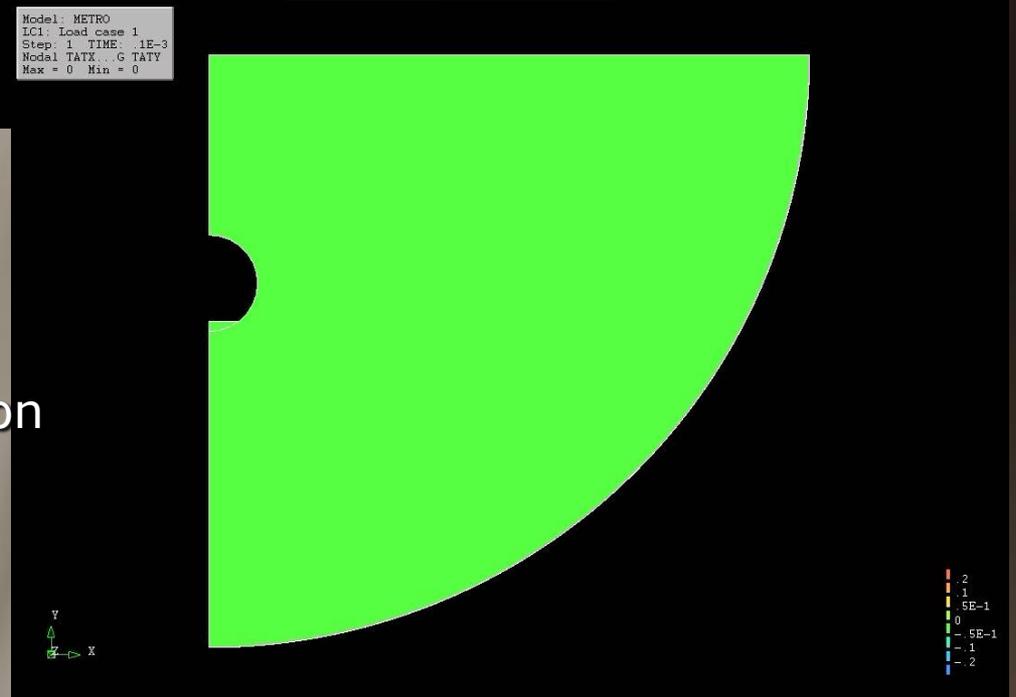

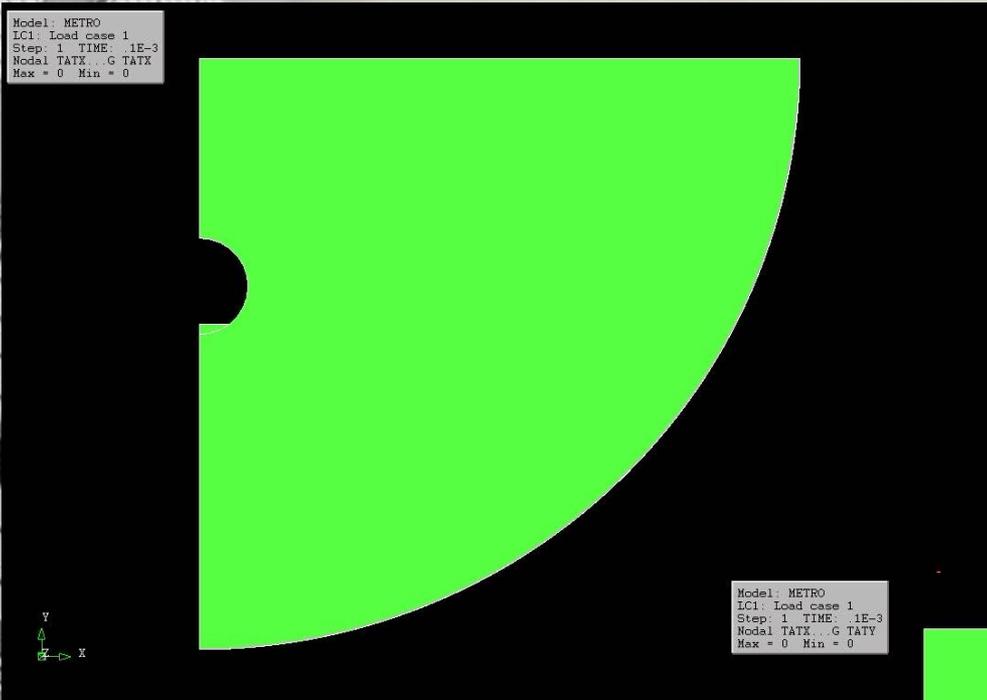

- Vertical vibration velocity
- Horizontal vibration velocity

2E-3
1E-3
5E-4
0
-5E-4
-1E-3
-2E-3

Problems

- Large scale
- Possible parallelism

- Vertical vibration acceleration
- Horizontal vibration acceleration
