Application of Sensitivity Analysis Procedures to Grid-based SSRVE Service

Daniel Bachniak*, Lukasz Rauch, Krzysztof Bzowski

AGH University of Science and Technology, Department of Applied Computer Science and Modelling, Krakow, Poland

Motivation of our work

Parameters of optimization   SSRVE   Variables to optimize

1. Number of control points

2. Degree of basis functions

3. Number of inclusions

| Number of iterations | = | Computation performance |

| Equivalent tensile stress MSE | = | Reliability of the results |
