Title:

Unlock the value of data using AI

Abstract:

From hardware that excels at training massive, unstructured data sets, to extreme low-power silicon for on-device inference, Intel AI supports cloud service providers, enterprises and research teams with a portfolio of multi-purpose, purpose-built, customizable and application-specific hardware that turn model into reality. Simplify and speed your development with software optimized to maximize hardware performance. By extracting valuable deep information from within mountains of data, AI is helping to do things like solve highly complex medical challenges, advance scientific research, and better predict events and human behaviour.
